The invention set forth in claims 18 to 20 does not involve an inventive step in the light of documents 1 or 2 and document 3 cited in the international search report.

Documents 1 and 2 set forth an encrypting/decrypting method of an encrypting/decrypting device provided with a common processing block constituted in such a manner that encryption and decryption can be carried out in either CBC mode or CFB mode by performing ECB processing, and it would be easy for a person skilled in the art to use the feature described in document 3 (fig. 6; paragraphs [0052] to [0059]), wherein encryption and decryption are controlled by a control bit relating to encryption which is contained in the header of an MAC structure, in the data inputted into the encryption/decryption method described in document 1 or 2, to constitute a feature wherein the selection of CBC mode or CFB mode is controlled in the common processing block according to
